Responsive HTML Tabs

Overview

This is a user-friendly, fully customizable, responsive tabs module to take any HTML content, including images, video or module... and display it in a clean organized and responsive tabbed navigation. It works out of the box, making it simple to create beautiful but powerful enough to build branded and highly customized tabs with a unique look and feel. All customization can be handled via Module Settings.

New Features:

- Flat themes – 20 awesome flat themes and there are many different variations of flat themes.

Some Features:

10 Flexible ways to position – Tabs are very flexible and customizable, horizontal and vertical Tabs and it can be positioned in 10 Flexible ways.

Responsive Design – unique responsive features with Cross-browser and Cross-Devices support, fully compatible with Tablet, Desktop and Mobile.

Touch-Enabled – Tabs are displayed in a dropdown menu with touch enabled events and fast CSS3 Transitions

10 Preset Themes – Comes with 10 built-in themes that are ready to go. Also comes with 4 style normal, underlined, clean and multiline tabs. All themes and styles comes in 6 different sizes.

Responsive fluid grid – very lightweight responsive fluid grid system included.

Deep-Linking – Tabs are bookmarkable and also supports deep linking. Makes URL automatically change when you select tabs and you can easily link to specific tab with hashtag.

Cross-browser and Platform – it supports all major desktop browsers (including IE8, IE9, IE10, Chrome, Firefox, Safari, Opera) and mobile browsers. We have tested it on iPad, iPhone (IOS), Samsung Galaxy S3, Samsung Note 2 (Android).

No absolute positioning and height – animation and transition works perfect without absolute positioning or fixed height.

Orientation – Support horizontal and vertical tabs.

Autoplay - Support Automatically animate through Tabs when visitors arrive on your website with optional stop on hover/click (smart autoplay).
