Contingency Contracting

3-Part Criteria for GCCMAC/GCSMAC

✓ Emergency or contingency situation/conditions
  --Mission demands exceed normal acquisition timing parameters
  --Austere/contingency environment

✓ Element of significant uncertainty as to scope, schedule, time, supporting cost plus contract use
  --Requirements not well defined

✓ Work is predominantly facilities engineering related activities

• Not equipped to carry out military defense or offense, not intended to replace all of the functions and capabilities of the military engineer.

• One set of tools in NAVFAC’s toolbox primarily used for response for emergency or contingency operations…but not the only choice.

• Supports NAVFAC’s facilities engineering mission; some logistics capabilities…≠ Army’s LOGCAP or Air Force AFCAP Contracts.
Mobile Utilities Support Equipment (MUSE)

• Capability Provided by NAVFAC Engineering and Expeditionary Warfare Center (NEXWC)
• Provide portable diesel engine driven generators, substations and switchgear
• Provide technical expertise and operators
• Equipment includes
  – 750 kW to 2500 kW diesel driven electrical generators
  – 1500 kVA to 5000 kVA electrical substations
